

Project Requirements Confirmation

Hi,

Before we begin development, I'd like to do one final confirmation to make sure we're 100% aligned and that nothing has been missed.

1. Premium, modern, fully responsive website inspired by the reference design (not a copy).
2. Customer registration and secure login.
3. Customer dashboard showing company details, previous jobs, and current jobs.
4. Admin dashboard to manage customers, jobs, quotes, invoices, and delivery statuses.
5. Job request form with collection address, delivery address, date & time, weight, dimensions, vehicle/van type, notes, and attachments.
6. Automatic rough quote estimate with the final quote approved manually by the admin.
7. Live tracking: Job Received, Driver On The Way, On Site, Loaded, At Delivery Location, Delivered (with POD).
8. Email notifications.
9. Invoice generation, invoice history, and online invoice payments.
10. Online payment gateway integration.
11. Customer portal and admin panel only (no separate driver portal).
12. Premium custom UI/UX.
13. Optimized performance, security, and responsiveness.
14. Client provides branding, logo, images, and content.

Please confirm everything above is correct or let me know if anything should be added, removed, or modified before development begins.

Thank you!
